BW of FM signals:

Carson's Rule for BW of FM signal:

- For large values of β , BW approaches ΔF
- For small values of β , $BW \approx 2F_m$

Combining these two principles, Carson's rule for BW of FM signals is given as:

$$BW \approx 2\left(1 + \frac{1}{\beta}\right) \Delta F$$

- For large β , $\frac{1}{\beta} \approx 0 \Rightarrow BW \approx 2 \Delta F$
- For small β , $\frac{1}{\beta} \gg 1 \Rightarrow BW \approx 2 \frac{1}{\beta} \Delta F \approx 2 \frac{1}{\frac{\Delta F}{F_m}} \Delta F \approx 2 F_m$

$$BW \approx 2\left(1 + \frac{1}{\beta}\right) \Delta F \Rightarrow BW \approx 2 \Delta F + \frac{2}{\beta} \Delta F \Rightarrow BW = 2 \Delta F + 2 F_m$$

TABLE A3.1 *Table of Bessel Functions^a*

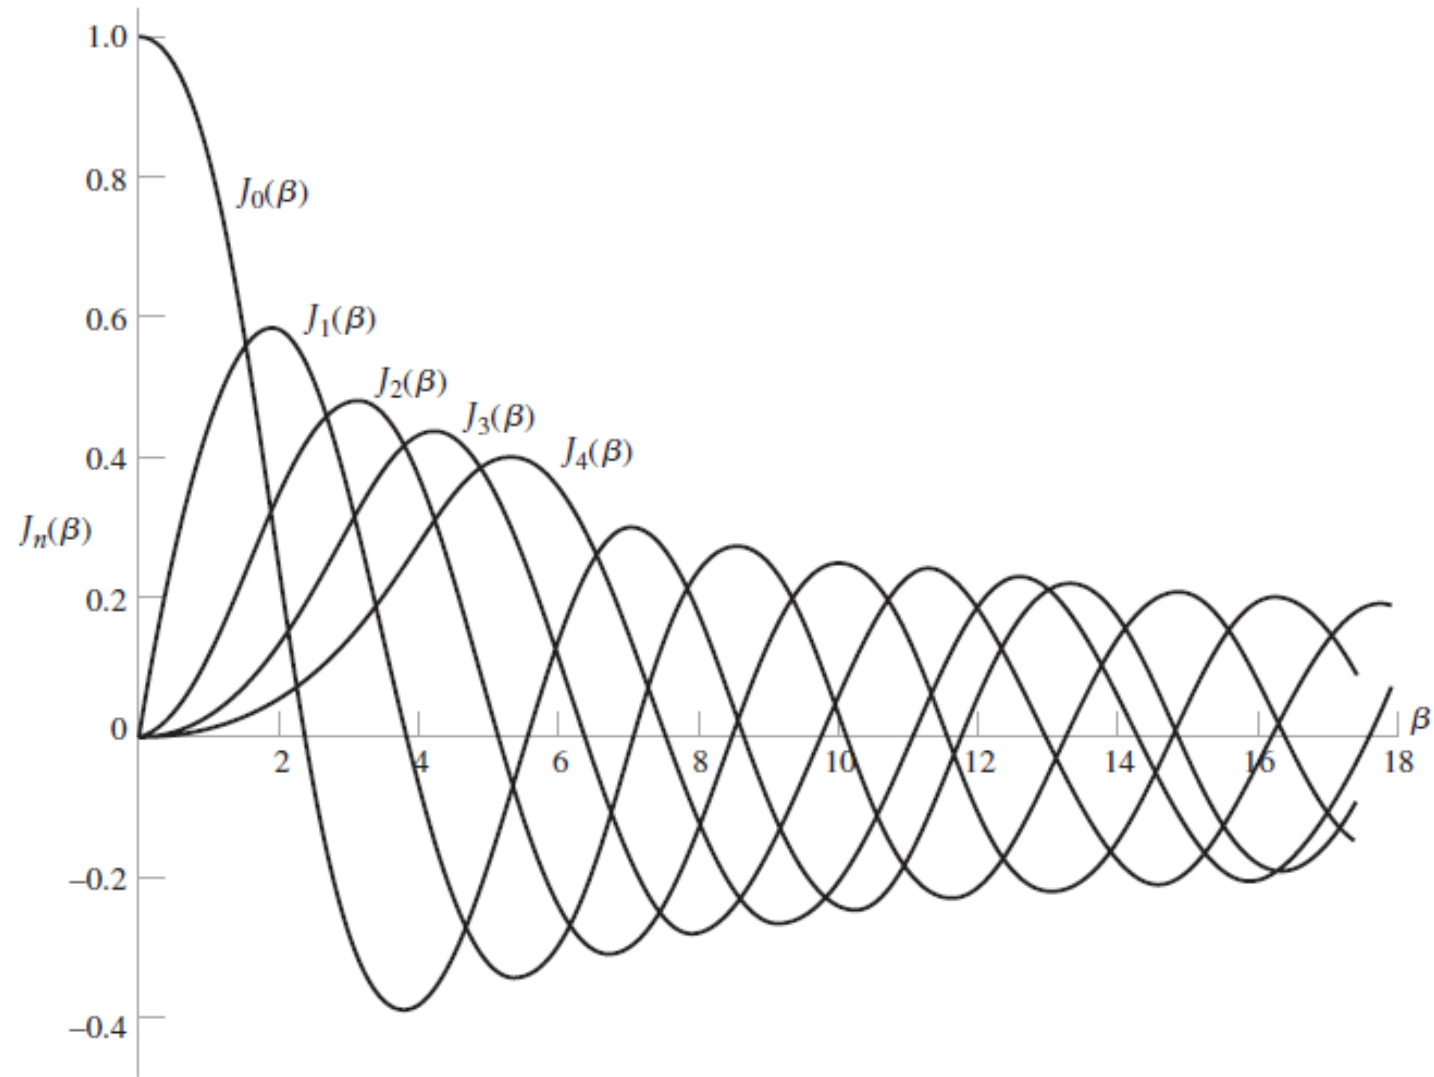

FIGURE 4.6 Plots of the Bessel function of the first kind, $J_n(\beta)$, for varying order n .

Power of FM signal:

$$s(t) = A_c \sum_{n=-\infty}^{\infty} J_n(\beta) \cos 2\pi(f_c + nf_m)t$$

$$\begin{aligned} s(t) &= \dots + A_c J_{-2}(\beta) \cos 2\pi(f_c - 2f_m)t - A_c J_{-1}(\beta) \cos 2\pi(f_c - f_m)t \\ &+ A_c J_0(\beta) \cos 2\pi f_c t + A_c J_1(\beta) \cos 2\pi(f_c + f_m)t + A_c J_2(\beta) \cos 2\pi(f_c + 2f_m)t \\ &+ \dots \end{aligned}$$

$$\begin{aligned} P_{total} &= \dots + \frac{A_c^2 J_{-2}^2(\beta)}{2} + \frac{A_c^2 J_{-1}^2(\beta)}{2} + \frac{A_c^2 J_0^2(\beta)}{2} + \frac{A_c^2 J_1^2(\beta)}{2} + \frac{A_c^2 J_2^2(\beta)}{2} + \dots \\ &= \frac{A_c^2}{2} [\dots + J_{-2}^2(\beta) + J_{-1}^2(\beta) + J_0^2(\beta) + J_1^2(\beta) + J_2^2(\beta) + \dots] \end{aligned}$$

Power of FM signal:

$$= \frac{A_c^2}{2}$$

Property:

$$\sum_{n=-\infty}^{\infty} J_n^2(\beta) = 1$$

Power of FM signal after modulation = Power of carrier before modulation

$$s(t) = \frac{A_c^2}{2}$$

$$c(t) = A_c \cos(2\pi f_c t + \varphi)$$

$$P_T = \frac{A_c^2}{2}$$

Power of FM signal:

$$P_{c(\text{after modulation})} = \frac{A_c^2 J_0^2(\beta)}{2} \text{ due to } A_c J_0(\beta) \cos 2\pi f_c t$$

If we reduce $\frac{A_c^2 J_0^2(\beta)}{2}$ to 0, we'll get 100% efficiency:

$$\eta = \frac{P_{SB}}{P_c + P_{SB}}$$

Eigen value of β when $\eta = 100\%$,

$$J_0(\beta) = 0$$
$$\beta = 2.4, 5.5, 8.6, 11.8, \dots$$
