

# **IMPORTANT SIGNALS -**

## **DISCRETE TIME**

# Discrete Time Unit Functions

- The discrete-time unit step, is defined as:

$$u[n] = \begin{cases} 0, & n < 0 \\ 1, & n \geq 0 \end{cases}$$

- The discrete time unit impulse is defined as:

$$\delta[n] = \begin{cases} 0, & n \neq 0 \\ 1, & n = 0 \end{cases}$$

- The discrete-time unit impulse is the first difference of the discrete-time step as:

$$\delta[n] = u[n] - u[n - 1]$$

- The discrete-time unit step is the running sum of the unit sample as:

$$u[n] = \sum_{m=-\infty}^n \delta[m]$$

# Discrete Time Unit Functions

$$u[n] = \sum_{k=0}^{\infty} \delta[n-k]$$

- A unit step can be written as an infinite sum of time-delayed unit impulses

# Exponential Signals

➤ Real Exponential signal  $x[n] = Ae^{an}$ ;  $A$  and  $a$  are **Real**

**a)**  $a > 0$  and  $A > 0$ ;  
exponential rise

**b)**  $a < 0$  and  $A > 0$ ;  
exponential decay

**c)**  $a > 0$  and  $A < 0$ ;

**d)**  $a < 0$  and  $A < 0$ ;

➤ How will (c) and (d) look like ???

# Exponential Signals

➤ Real Exponential signal  $x[n] = Ae^{an}$ ;  $A$  and  $a$  are **Real**

**c)**  $a > 0$  and  $A < 0$ ;

**d)**  $a < 0$  and  $A < 0$ ;

# Damped Complex Sinusoidal Exponentials

$$Ae^{an}, \quad A = 1 \text{ and } a = \pm 0.1 + j0.5$$

# Sinusoidal Exponential Harmonics

- Example of Discrete-time harmonics

# Periodicity of Discrete-Time Sinusoids

- A periodic discrete-time signal  $x[n]$  has the property that for a positive integer  $N$ ,

$$x[n] = x[n + N], \text{ for all values of } n.$$

- The discrete time signal  $x[n]$  is periodic with period  $N$  if it is unchanged by a time shift of  $N$

$$x[n] = Ae^{j\omega n}; \text{ then:}$$

$$x[n+N] = Ae^{j\omega(n+N)} = Ae^{j\omega n} \cdot e^{j\omega N} = x[n];$$

Possible if:

$$e^{j\omega N} = 1$$

# Periodicity of Discrete-Time Sinusoids

➤ Or  $\omega N = 2\pi m$  or  $N = 2\pi m / \omega$

➤ Here  $m$  and  $N$  should be integers

➤ We can also write the above as:

$$\omega = (2m/N) \cdot \pi$$

➤ Therefore, a discrete-time sinusoid is periodic if its radian frequency  $\omega$  is a rational multiple (integer/integer) of  $\pi$

# Periodicity of Discrete-Time Sinusoids

- EXAMPLE: Is the sinusoid periodic? What is the fundamental period?

# Periodicity of Discrete-Time Sinusoids

- Periodic with fundamental period 12.

# Periodicity of Discrete-Time Sinusoids

- EXAMPLE: Is the sinusoid periodic? What is the fundamental period?

$$x[n] = \cos\left(\frac{8\pi n}{31}\right)$$

# Periodicity of Discrete-Time Sinusoids

# Periodicity of Discrete-Time Sinusoids

- EXAMPLE: Is the sinusoid periodic? What is the fundamental period?

$$x[n] = \cos\left(\frac{n}{6}\right)$$

# Periodicity of Discrete-Time Sinusoids

# DT Sinusoids Frequency & Rate of Oscillation

- for the CT signal  $x(t) = e^{j\omega_0 t}$  we have the following two properties:
  1. the larger the magnitude of  $\omega_0$ , the higher the rate of oscillation in the signal
  2.  $e^{j\omega_0 t}$  is periodic for any value of  $\omega_0$

# DT Sinusoids Frequency & Rate of Oscillation

- for the DT signal  $x[n] = e^{j\omega_0 n}$  these properties don't hold for the following reason:

$$e^{j(\omega_0 + 2\pi)n} = e^{j2\pi n} e^{j\omega_0 n} = e^{j\omega_0 n}$$

- thus the exponential at frequency  $\omega_0 + 2\pi$  is the same as the exponential at frequency  $\omega_0 \Rightarrow$  we only need to consider the frequency interval  $-\pi \leq \omega < \pi$
- a DT sinusoid,  $e^{j\omega_0 n}$ , is periodic of period  $N$  only when:

$$e^{j\omega_0(n+N)} = e^{j\omega_0 n} \Rightarrow e^{j\omega_0 N} = 1$$

$$\omega_0 N = 2\pi m \text{ for some integer } m$$

$$\frac{\omega_0}{2\pi} = \frac{m}{N}$$

- if the above condition is not met, the DT sinusoid is not periodic

# DT Sinusoids Frequency & Rate of Oscillation

$$x[n] = \cos(0 \cdot n) = 1, \Omega = 0$$

MINIMUM OSCILLATION

$$x[n] = \cos(\pi n/8), \Omega = \pi/8$$

(b)

$$x[n] = \cos(\pi n/4), \Omega = \pi/4$$

(c)

$$x[n] = \cos(\pi n/2), \Omega = \pi/2$$

(d)

$$x[n] = \cos(\pi n), \Omega = \pi$$

MAXIMUM OSCILLATION

$$x[n] = \cos(3\pi n/2), \Omega = 3\pi/2$$

(f)

$$x[n] = \cos(7\pi n/4), \Omega = 7\pi/4$$

(g)

$$x[n] = \cos(15\pi n/8), \Omega = 15\pi/8$$

(h)

$$x[n] = \cos(2\pi n), \Omega = 2\pi$$

MINIMUM OSCILLATION

# Problem-1

- Determine the fundamental period of the DT signal:

$$x[n] = e^{j(2\pi/3)n} + e^{j(3\pi/4)n}$$

# DT Sinusoids Frequency & Rate of Oscillation

$$x[n] = e^{j(2\pi/3)n} + e^{j(3\pi/4)n} = x_1[n] + x_2[n]$$

period: 3 samples

period: 8 samples

period: 24 samples
